

## BASKET 2.5 TONNE

The IKM Technology **Subsea Basket** is designed for transport of tools and equipment. It is a lightweight chassis made out of stainless steel, with foldable lifting arms for easy access during loading and unloading. It is made with a hatch to assure that nothing falls out of the basket while lowering or lifting the basket in heavy sea. It can be used with or without lid. When the lid is used, it will be locked in closed position by the lifting yoke.

### SPECIFICATIONS
